

## *Ensuring Fulfilment of End-to-End Timing Requirements in ADAS Projects*

*Olaf Schmidt*  
*Business Development Manager*

## My Team Says That . . .

***"The CPUs do not have enough performance."***

***"We don't understand the root cause of the sporadic error."***

***"We need weeks for optimization."***

## Our Experience from More Than 180 Projects is...

**Nearly 90% consider timing to later in their project.**

**Timing requirements are often unknown or imprecise.**

**Poor dynamic behavior design results in CPU underutilization.**

# Agenda

## *Proven methodology*

- *Model based design*
- *Simulation*
- *Virtual verification*
- *Test*
- *Continuous integration*

## *Leads to . . .*

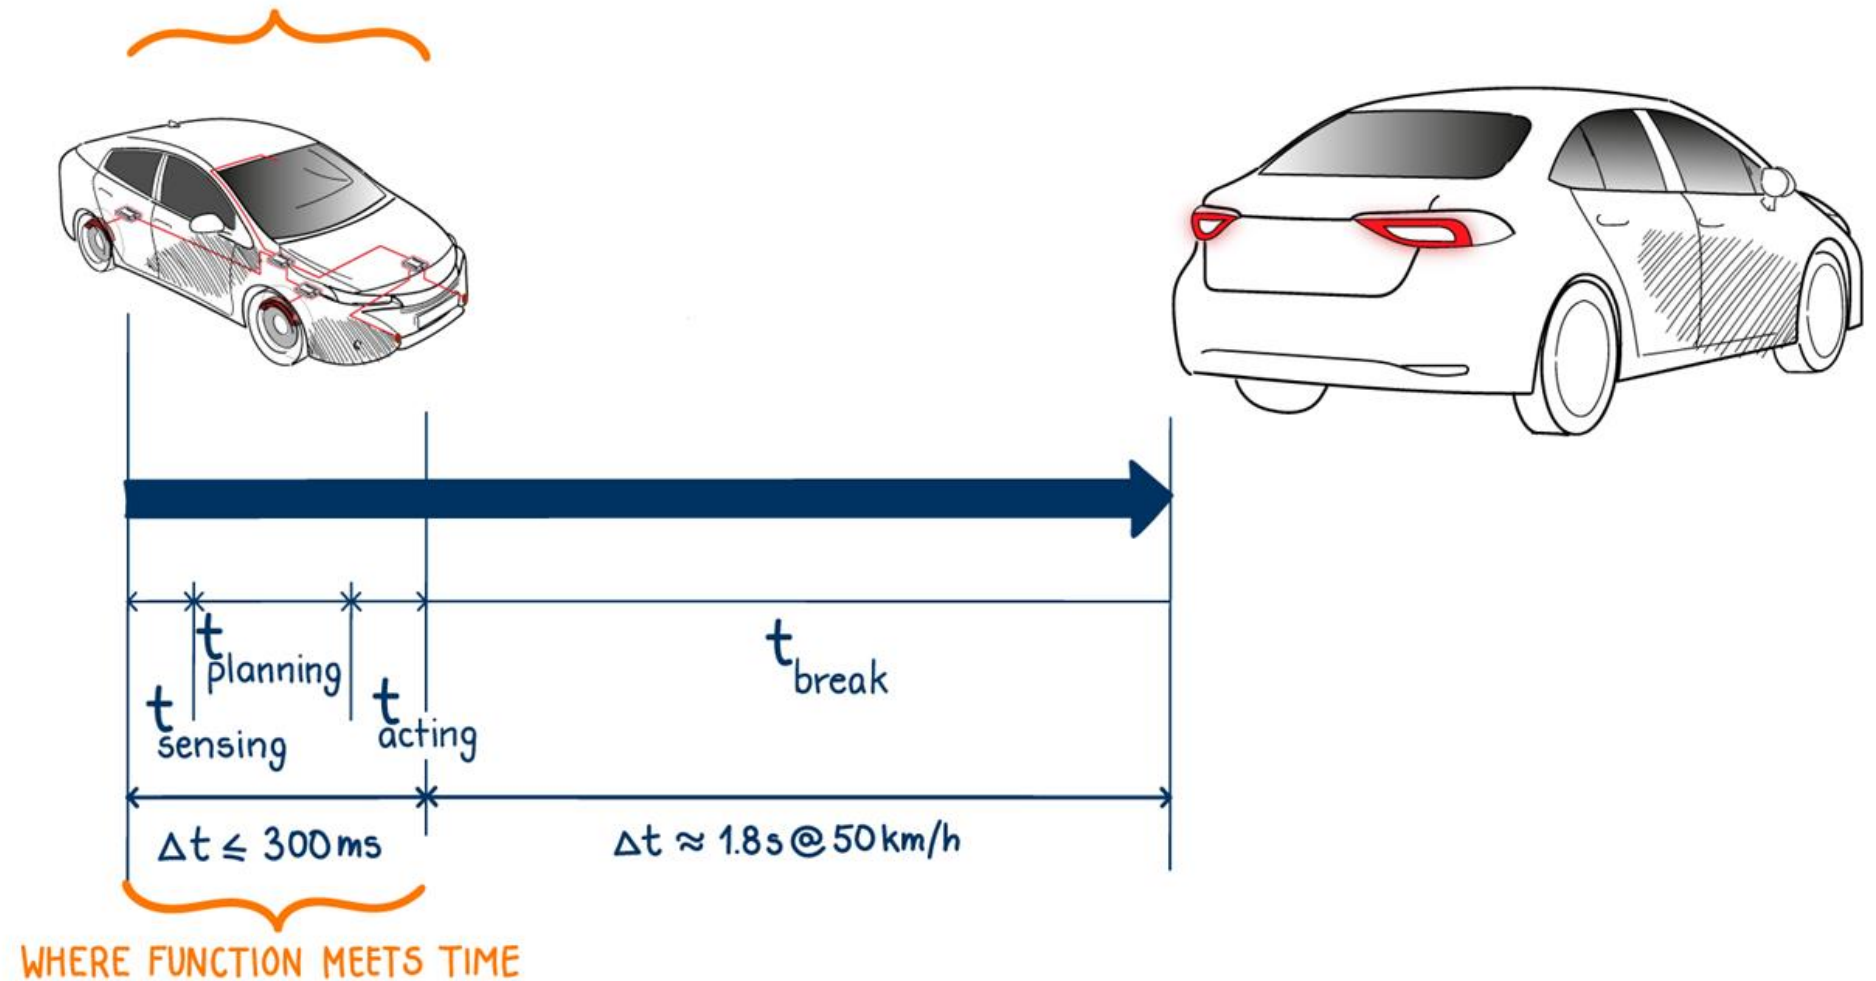

- *less stress.*
- *reduction in wasted time.*
- *fewer wasted resources.*

# Advanced Emergency Braking System (AEB)

# Advanced Emergency Braking System (AEB)

## Concept to:

- *model end-to-end behavior*
- *specify timing requirements precisely*
- *design, optimize, analyze and test*

Track report – the first central ADAS-architecture goes into production  
Distribution of event chains

2017

SOP

A SINGLE REALTIME CRITICAL  
EVENT CHAIN SPREADS  
ACROSS SWCS AND SOCS.

OUR CROSS-SOC SCHEDULER  
OPTIMIZES ALL 54 REALTIME  
CRITICAL EVENT CHAINS  
SIMULTANEOUSLY!

AUTOMOBIL KONGRESS  
ELEKTRONIK

# Sensor Data Fusion in High Performance Domain Controllers

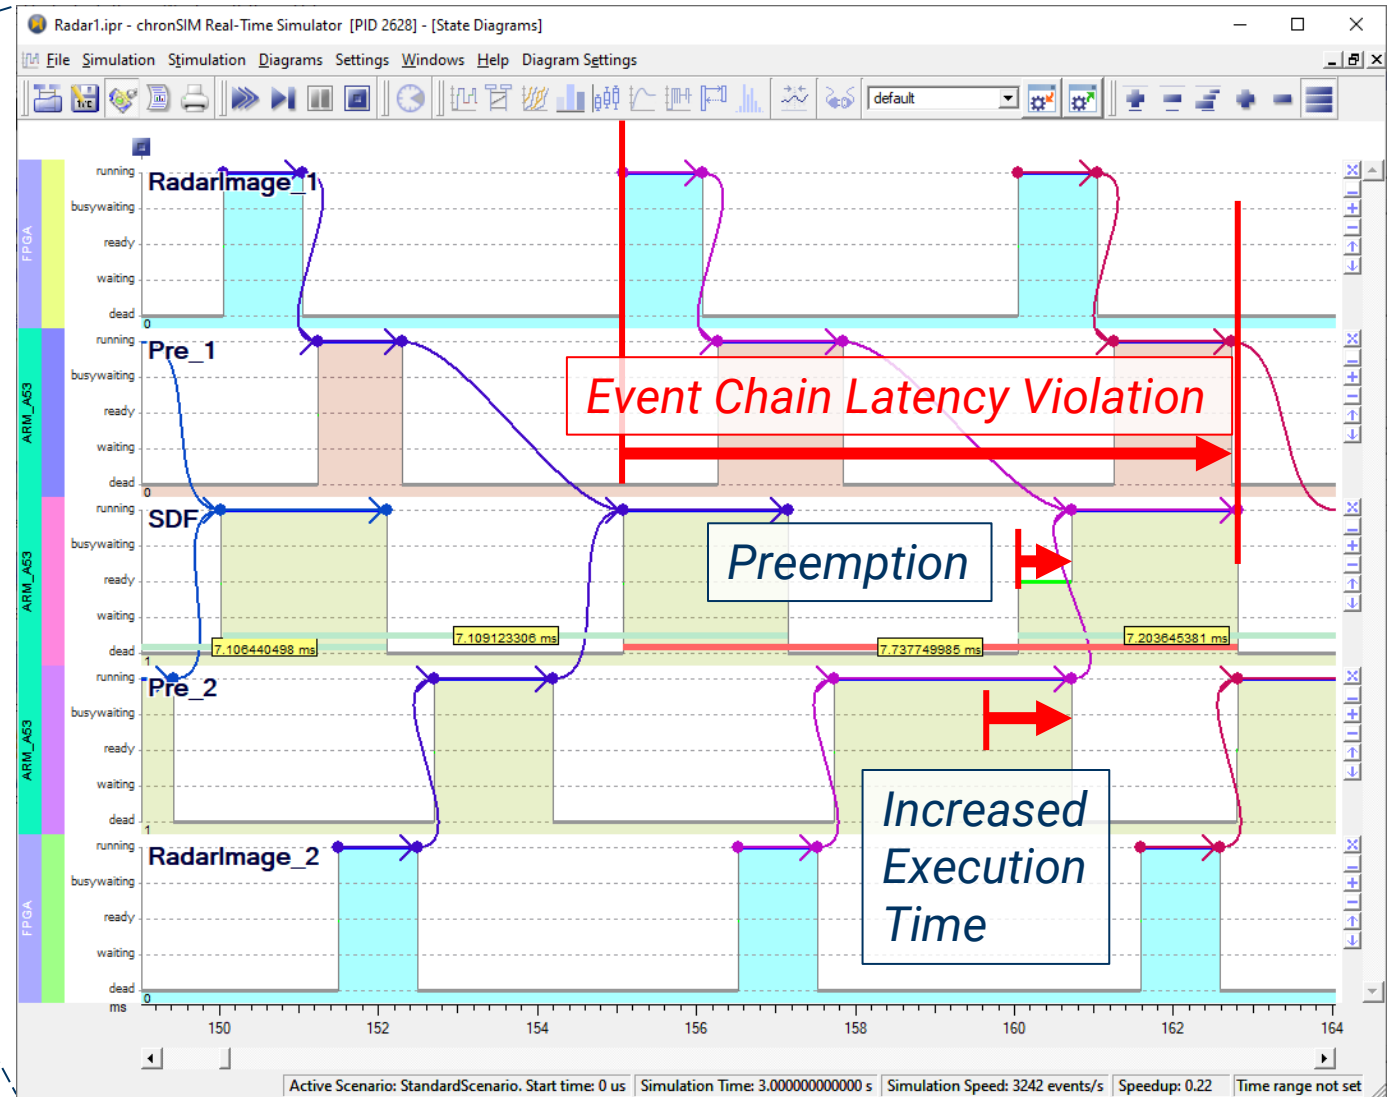

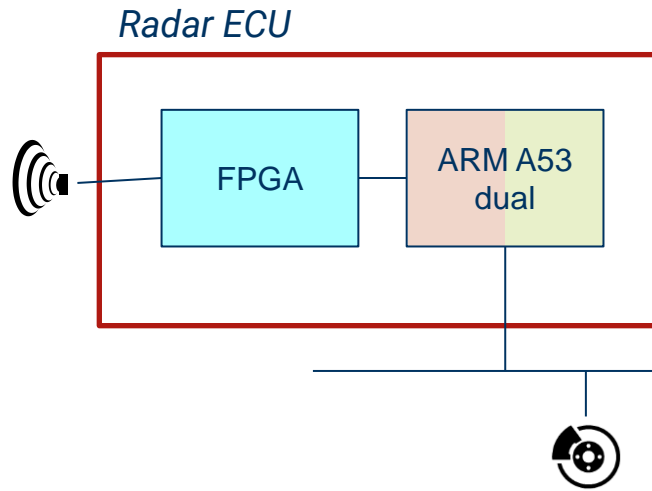

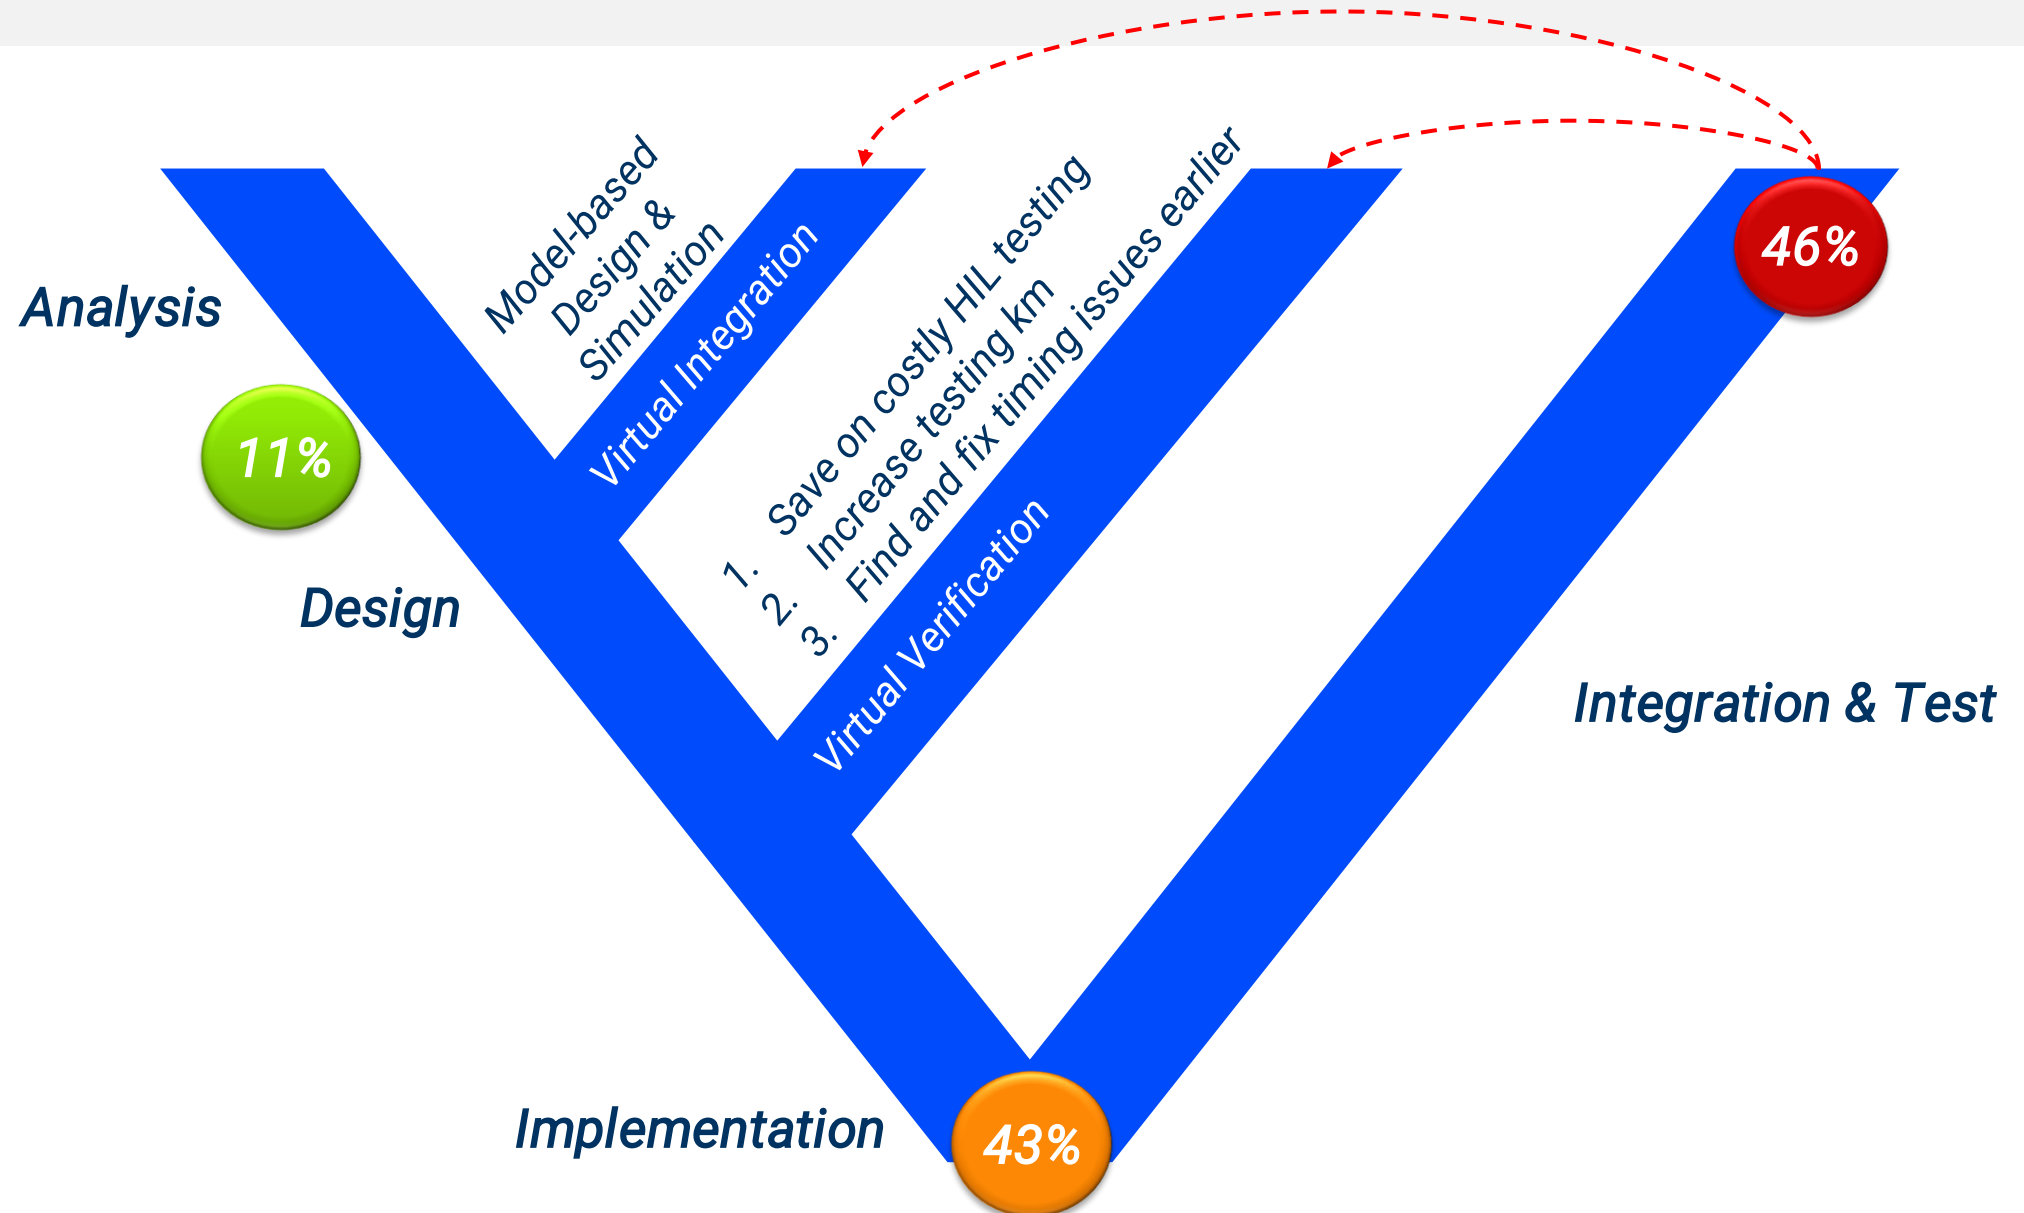

*Occurs in ECU/ECU, Sensor/CPU, CPU/CPU scenarios*

# Multi-Core and Scheduling

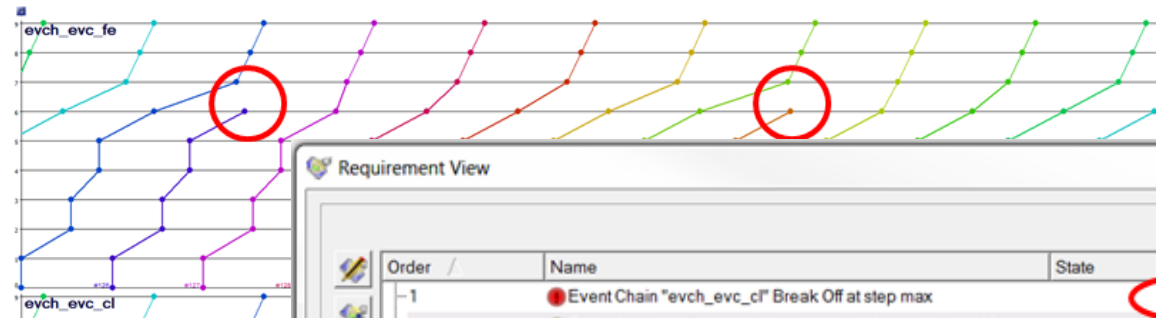

## Modellbasierte Architekturentwicklung und Simulation

### Validierung der Ergebnisse

- Fehlverhalten tritt genügend oft auf
- Bei verschiedenen Wirkketten zu unterschiedlichen Zeiten

Requirement View				
Order	Name	State	Failed	Successful
1	Event Chain "evch_evc_cl" Break Off at step max		18.5% (56)	81.5% (247)
	Event Chain "evch_evc_cl" Latency step first to last <= 100 ms		0% (0)	100% (303)

**Thomas Jäger**  
Architect, ADAS

*„We have found **errors in simulation** 12 month earlier and were able to **understand the root cause** and to **fix it efficiently**“*

## Simulation-based requirement evaluation

### Real-Time Requirements

- CPU, Core and Bus Load
- Event Chain Latencies
- Event Chain Synchronization
- Date Synchronization
- Response Time
- Runnable's Execution Rate and Order
- Start-to-Start Jitter
- IRQ's Loss or Blocking
- Net Execution Time of SW Functions
- RTOS events

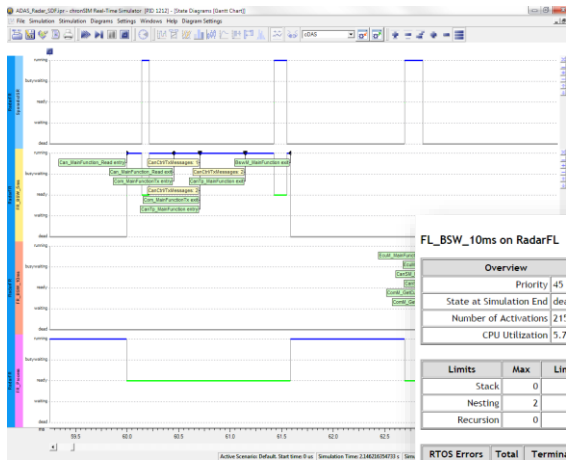

Requirement View

Filter:   **CHRONVIEW**

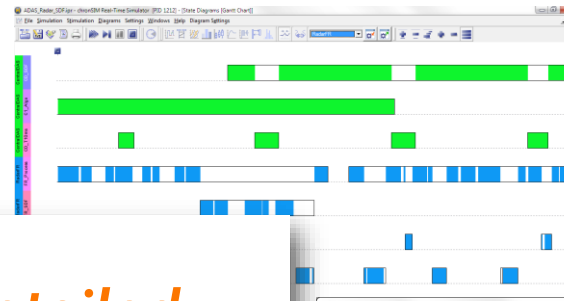

Order	Name	Failed	Successful	Critical
1	RTOS Failures No Activation Losses	40	-	-
2	Requirement Group Eventchain Latencies	0	4	3
1	Event Chain "EcR2Fr" Latency step first to last <= 140 ms	0% (0)	100% (217)	1.4% (3)
2	Event Chain "EcFrDirect" Latency step first to last <= 100 ms	0% (0)	100% (218)	22% (48)
3	Event Chain "EcRDirect" Latency step first to last <= 100 ms	0% (0)	100% (217)	20.3% (44)
4	Event Chain "EcFr2Fr" Latency step first to last <= 140 ms	0% (0)	100% (218)	0% (0)
3	Requirement Group Eventchain Breakoffs	4	0	0
1	Event Chain "EcR2Fr" Break Off at step max (ignoring last 5)	12.7% (27)	87.3% (186)	-
2	Event Chain "EcFr2Fr" Break Off at step max (ignoring last 5)	19.7% (42)	80.3% (171)	-
3	Event Chain "EcRDirect" Break Off at step max (ignoring last 5)	25.4% (54)	74.6% (159)	-
4	Event Chain "EcFrDirect" Break Off at step max (ignoring last 5)	19.2% (41)	80.8% (172)	-
4	Requirement Group Response Times	0	2	0
1	Response Time FR_ShootReceive < 40 ms	0% (0)	100% (218)	-
2	Response Time FL_ShootReceive < 40 ms	0% (0)	100% (217)	-

# Event Chain Focused Design – at Different Levels

I. Customer function

II. Functional net / logical architecture

III. System architecture - OEM view

IV. System architecture - ECU view

V. Software architecture

# Customer Statements

**Andreas Wolfram**  
Team Lead Software

"The feasibility of such **change requests** can now be analyzed in **1/3 of the usual time**. This saves time and money, allows fast **feedback to the customer** and gives **more confidence in the modified system**."

**Dr. Jan Meyer**  
PMT

"Real-time simulation with **chronSIM** supports and **improves the development process**. We detect **timing errors** in **early development phases**. In addition we have more trust because of **improved system understanding**."

**Thomas Jäger**  
Architect ADAS

"Through **simulations**, we **found errors 12 months earlier** than usual, and were able to **understand the root causes** and **solve them efficiently**."

**Bernhard Augustin**  
Driver Assistance Systems

"Up to now we identified **timing** and performance **problems** only during series development. Next time we will do this **systematically** right from the start - already in the **concept phase**."

**Markus Breitenberger**  
System & Application Group Leader

chronSIM is a **valuable tool**. Without, several problems fixed would still be present in our system today.

# Excellence in Real-Time Delivers...

## High quality products

- Robust and scalable **dynamic architecture**
- Verified **timing requirements**
- Optimized use of **hardware resources**
- Reduced number of **sporadic timing errors**

## Efficient processes

- Handle **complexity** efficiently and reduce risk of failures
- **Early detection** and correction of timing errors
- Smooth **collaboration** between OEM and Tier-1

## Savings in time and money.

Reduction in stress.
